

SHELL

LSI Industries supports Shell's image program with a variety of lighting and graphics products as well as installation and project management services.

LSI Petroleum Lighting worked with Shell Oil company's engineering staff to develop the Flat Lens Scottsdale® which became the standard canopy fixture for the RVI Level 1 facilities. Shell has since adopted LSI's newer Encore® Top Access canopy fixture which gives them energy-efficient, high performance, cutoff canopy lighting and lens flexibility. Die-cast Challenger® fixtures provide the site lighting, while Abolite Angled Reflectors highlight the Popeyes exterior store signage. The lighting package is completed with a variety of fluorescent fixtures delivering ambient and accent lighting in the c-store.

LSI Graphics Solution *Plus* manufactured five sizes of powder coated aluminum pump toppers (valances), pre-decorated, powder coated OEM style pump doors and powder coated dispenser riser panels. For Popeyes, LSI produced both the drive-thru and interior menu board systems.

In addition, LSI Adapt provided complete project management and installation services.
